Research interests

My research interest falls at intersection between control and machine learning. My goal is to design data-driven and provably correct solutions for control of complex dynamical systems. I am particularly interested in verification of learning-based control algorithms.

Education

2021–2023 **Robotics, Systems and Control M.Sc.**, *ETH Zürich*, *GPA – 5.73*.
Highlighted Courses: *Model Predictive Control, System Identification, Machine Perception, Probabilistic Artificial Intelligence*

2015–2021 **Mechanical Engineering B.Sc.**, *Koç University*, *GPA – 4.0*.
Summa Cum Laude, Graduated as 2nd in department

2015–2021 **Computer Science B.Sc.**, *Koç University*, *GPA – 4.0*.
Highlighted Courses: *Nonconvex Optimization for Explainable ML & DL, Machine learning, Reinforcement Learning*

2020–2020 **Exchange Student**, *University of British Columbia*.
Highlighted Courses: *Advanced Machine Learning, Dynamic Systems Modelling (Advanced), Computer Vision*

Master's Thesis

Title *Multi-step Predictors for Model Predictive Control*

Supervisors Johannes Köhler, Andrea Carron, Prof. Melanie Zeilinger

Description This thesis explored the idea of incorporating multi-step predictors in predictive control schemes

Experience

Sep 2022 – Feb 2023 **Visiting Scholar**, University of Michigan, Ann Arbor.
Engaged in research on backward reachability for nonlinear systems through learned models. Developed a method to construct model approximation error robust backward reachable sets and to synthesize safe controllers.
Additionally, worked on transformer-based neural network architectures and in-context learning for filtering and control problems.

Mar 2021	**Machine Learning Engineer**, Dcipher Analytics.
Sep 2021	Developed and implemented a state-of-the-art convolutional neural network-based solution for the detection of highly biodiverse regions from satellite imagery in collaboration with Sweden's Ecogain. Additionally, designed and executed a cutting-edge neural network-based solution for the diagnosis of acute otitis media disease from otoscopy videos as part of a research project at the University of Pennsylvania School of Medicine.
Apr 2020	**Research Assistant**, University of British Columbia.
Oct 2020	Implemented recurrent neural network-based user intention estimation frameworks for power-assisted manual wheelchair users.
Feb 2017	**Research Assistant**, Koç University.
May 2018	Conducted in vitro analysis of a mechanical heart assist device for Fontan patients. Designed and executed experiments to assess the performance of left-ventricular assist devices developed.

Teaching

Mar 2023	**Machine Perception**, ETH Zürich.
Jun 2023	I was a teaching assistant for the course, which entailed facilitating problem-solving sessions to supplement the lecture material covered and answering questions asked by students over moodle platform.
Sep 2018	**Statics and Mechanics of Materials**, Koç University.
Dec 2018	Took role as a teaching assistant in the course. My responsibilities included: holding office hours for students and giving problem sessions.
